- Theoretical blade tip visibility (turbine blade tip height 200 m)**

1 - 2 turbines visible

3 turbines visible

4 turbines visible

5 turbines visible

Note:
The ZTV illustrates the extent of visibility of the proposed Glenouter Wind Farm (turbine blade tip height 200 m). Visibility is shown to a distance of 45 km from the outermost turbines in all directions. The ZTV is calculated to turbine blade tip height from a viewing height of 2 m above ground level. The terrain model is derived from OS Terrain 5 and OS Terrain 50 height data (obtained from Ordnance Survey in 2026). Earth curvature and atmospheric refraction have been taken into account. The ZTV was calculated using ArcGIS Pro 3.6.1 software.

Cumulative wind farms based on information available to LUC on 28/01/2026. This plan shows all operational, under construction, consented, proposed and scoping stage wind farms within 45 km. Turbines under 50 m and single turbines beyond 5 km have been omitted. Scoping stage schemes are mapped, but will not be assessed in the detail of the cumulative LVIA.
